Interface Definition

The interface definitions make it possible to electronically transfer *Citation* data and *Disposition* data, via imported files, from the individual counties to the Florida Association of Court Clerks, Inc. (FACC), which acts as the Central Site. Additionally, they allow for the receipt of citation data from Florida Highway Patrol (FHP) Troop Headquarters and the distribution of them back to the counties; as well as the ability to forward citation, disposition, and D6 data to the Department of Highway Safety and Motor Vehicles (DHSMV). Because the Central Site is only a repository for citation and disposition information provided by the counties and FHP, the input file formats have been designed to allow the data providers the ability to add and correct their data through the use of the "Update Type" code. The Interface Definitions act as conduits between these external entities to allow for the seamless transfer of data between non-standardized sources. The citation and disposition data received from, and subsequently distributed to, the counties can be in either **"fixed length" or "delimited" format**. Once a county has specified a format type to the FACC System Administrator, all files received from and sent to that county must be in that selected format.

File Format Definition

There is neither an advantage nor disadvantage when choosing between fixed length or delimited file formats. The format will be clearly delineated by how the data will be extracted from county databases prior to transmitting to the Central Site. The two file formats were identified and created so that the interface could read data that is being transmitted from county systems that are not uniform in protocol.

Interface Definition Table Format

Each Interface Definition table format has the information describing the characteristics of the fields in the table. The field definitions are as follows:

ID	Sequential number to identify column
Field Description	Description of the contents of column

Data Type	Format of data
	  A – Alphabetic characters only
	  A/N – Alphabetic and numeric characters
	  N – Numeric characters only
	  DATE – Numeric digits in specified date format

Max Field Size	Length of field
Start	Beginning position of field in record
End	Ending position of field in record
M/O/C	M – Mandatory field to be populated O – Optional field: provide value if available. C – Conditional; field has dependence on another field
Comments	Additional information pertinent to field

Field Justification and Optional Fields
Within the "Data Type" field of the Interface Definition Tables, alphanumeric (A/N) codes must be left justified and filled with blank spaces to the right. Additionally, numeric (N) codes must be right justified and filled with zeros to the left. Optional A/N fields may have blank values in fixed-length format; optional numeric fields should be zero-filled in fixed-length format. In pipe-separated format, an optional field may simply be null.

File Naming Convention
The naming convention of the import file will consist of 15 numerals followed by either "cit", "dis", "d6", or "fhp" respectively, determined by whether the file represents Citations, Dispositions, or D6 data from a county, or imported Florida Highway Patrol Citations. The files exported to the county from TCATS central site, containing new FHP citations, will have their filename ending in "fcit". Each file that is transmitted to Central Site needs to have a unique filename. If a file with the same filename is already at Central Site the county will be informed of the error and that they will need to rename the file in order to get it processed.

- The first two numerals will be the county number 01 thru 67; while FHP Troops A thru J will use numbers 71 thru 80, respectively.
- The next three numerals will be the agency number 000 thru 999 (use 000 when the file originates from or is assigned to a county).
- The next eight numerals will be the date in the format YYYYMMDD.
- The next two numerals will be a sequence number to uniquely identify each file generated for the above date. This will always start with 01 for the first file for this date and be incremented by one if additional files are created on the same day.
- A typical file name would either look like "010002001011301cit", "010002001011301dis", "010002001011301d6", "710002001011301fhp", or "010002001011301fcit".

County Error and Transmission Reports
The loading of a citation or a disposition file at TCATS central site will result in the creation of two error files and three transmittal report files. The two error files have the same file name as the file which was loaded, with the addition of a file extension .rpt (error message report from load) and .log (database errors in load due to invalid data in fields, e.g. invalid date). If the load gave no errors, these files will contain a message stating that no errors occurred. Example of file name: the imported file named "010002006011301cit" would produce an error report file named 010002006011301cit.rpt, and a database load error file named 010002006011301cit.log. The three transmittal report files show which citations were sent to DHSMV in the ARR, UTC and D6 files for that day. The filename will include the county number, date and file type with an .rpt extension. An example of the filename is 0120061006arr.rpt
The loading of the ARR, UTC and D6 files at DHSMV will create three error files. The three error files will be sent to the counties via TCATS Central Site. The filename sent to the counties will consist of the county number, "dhs", the date the file was sent from DHSMV, the file type (i.e D6, UTC, and ARR) and an .rpt extension, an example of the filename is "01dhs20060929utc.rpt".

Citations From Counties

Citation Data Interface Description

The process of transmitting a citation to the Central Site (FACC) is as follows:

- A citation should be transmitted to Central Site at least twice: once when it is first entered in the county (with update type "ADD", and with "A"ctive status in field 120), and once when it is disposed (with update type "UPDATE", and with "I"nactive status in field "Status" field). Failure to send a citation update with inactive status will result in an error in the disposition load, since the UTC file transmitted to DHSMV requires the most up-to-date information for the citation.
- To begin the process, the county or agency will put the citation into one of the two file formats (Fixed Length or "|" Delimited Length), after having specified to the FACC System Administrator which file format will be used when going live. For files that are to be formatted in the fixed length convention, sizes and positions of data fields are listed in the *Citation Interface Definition (Fixed length)* table. For files that are to be formatted in the delimited length convention, fields will be separated by the "|" character, and are listed in the *Citation Interface Definition (Variable length records with fields separated by "|")* table. A copy of *Citation Interface Definition (Variable length records with fields separated by "|")* table can be obtained by contacting the FACC System Administrator.
- Each record within the file must have an "update type" established, i.e. either an "ADD," "UPDATE," or "DELETE" (A, U, or D, respectively). Establishing an update type will determine the action taken by the interface with respect to the incoming file. An "A," for "add," is used to identify a new citation being imported that has not already been incorporated into the Central Site database. An "update," identified by the "U" type code, is used to identify an update or modification to an existing citation and will consequently replace the existing citation with the new information. A "delete," or "D," identifies a citation that was previously sent in error and will be deleted from the Central Site database. Additionally, if the record is established as an "ADD", the program will ensure there are no matching records in the citation history table, to avoid duplication. However, if the record is established as an "UPDATE" or "DELETE", the interface will check for the existing matching citation to either update (replace) or delete the record. If no existing matching citation is found for an "UPDATE", the citation will be treated as an "ADD".
- Upon completion of these steps, the file will be sent from the county's gateway to the central site and be loaded in one of two methods (Automatic or Manual). The files submitted by individual counties will be placed into the "Input" directory. All citations will be loaded automatically unless there are notable reasons why the file should be loaded manually, with central site System Administrators making the decision as to when to manually load the file.
- Finally, the file will be checked for errors. For instance, if an attempt is made to add a citation that currently exists, or a citation record contains invalid data, then an error file will be generated listing the citation that caused the error and sent

7

back to the county for correction. The error file format is shown below; the file name will be the same as the input file, but with an extension ".rpt".

- The file may also generate errors during the database load step; if so, the database error file (original file name followed by an extension ".log") will show the records which gave an error, and indicate the nature of the error. Errors in this file often indicate a programming problem or lack of validation, and these should be given particular attention to avoid a recurrence of the error.
- The data sent to Central Site in the citation file will be used in the input to the arrest records extracted for DHSMV (when a new citation is added) and to the UTC extract for DHSMV (when a citation is disposed).
- All errors that a county receives from either Central Site or DHSMV should be corrected in the following manner: A record with an update type of "delete," or "D" needs to be transmitted. It is important that this record is followed by a record with an update type of "add," or "A" in order to ensure that the record is retransmitted to DHSMV.
- The County does electronically receive their DHSMV error reports directly from Central Site.

Dispositions From Counties

Disposition Data Interface Description
The process of sending a disposition to the Central Site (FACC) is as follows:

- To begin the process, the county or agency will put the disposition into one of the two file formats (Fixed Length or "|" Delimited Length), after having specified to the FACC System Administrator which file format will be used when going live. For files that are to be formatted in the fixed length convention, sizes and positions of data fields are listed in the *Disposition Interface Definition (Fixed Length)* table. For files that are to be formatted in the delimited length convention, fields will be separated by the "|" character, and are listed in the *Disposition Interface Definition (Variable length records with fields separated by "|")* table. A copy of *Disposition Interface Definition (Variable length records with fields separated by "|")* table can be obtained by contacting the FACC System Administrator.
- The files submitted by individual counties will be placed into the "Input" directory. Each record within the file must have an "update type" of an "ADD," or "A". An "A," for "add," is used to identify a new disposition or supplemental disposition being imported that has not already been inserted into the Central Site database. Additionally, if the record is established as an "ADD", the program will ensure there are no matching records in the disposition history table, to avoid replication.
- Upon completion of these steps, the file will be sent from the county's gateway to central site and be loaded in one of two methods (Automatic or Manual). All dispositions submitted from individual counties will be loaded automatically unless there are notable reasons why the file needs to be loaded manually, with central site System Administrators making the decision as to when to manually load the file.
- Finally, the file will be checked for errors. For instance, if an attempt to add an original disposition that currently exists, then an error file will be generated with the disposition that caused the error and sent back to the county for correction. The error file will be formatted as described below in the "Disposition Error Report File; it will have the same filename as the file sent by the county, but with a ".rpt" extension, indication that it is an error report file.
- The data sent to Central Site in the disposition file will be used (with the citation data) in the input to the UTC extract which is sent to DHSMV for disposed citations. Since the citation data is essential to this process, it is important that an updated citation record be sent to TCATS central site at the same time as the disposition is sent.
- The County does electronically receive their DHSMV error reports directly from Central Site.

Disposition Interface Definition (Fixed Length)

The Disposition Interface (Fixed Length) will be used to transmit citation information electronically from a county to TCATS central site. Because the counties can send up to thirty distributions for the disbursements of the citation fine, the following fields are repeated thirty times for distributions: Account, Entitlement Amount, Actual Amount, and Reason for Difference.

Disposition Error Report File (Fixed Length)

One Disposition Error Report File will be created for each imported disposition file, and will be transmitted to the originating county of the disposition file so that errors can be corrected and dispositions can be retransmitted to TCATS central site. This file is always in fixed-length format. For a list of possible error messages, see TCATS Appendix C in this document.

DHSMV UTC Citation Data Interface Description
The process of extracting a County citation from the Central Site (FACC) and transmitting it to DHSMV is as follows:

- To begin the process, the Central Site (FACC) will put the citation into the Fixed Length file format with data fields delineated in the *UTC Interface Definition– Extracted for DHSMV* table.
- After this process, and upon receipt of the disposition with the verdict, the file will be extracted from the Central Site (FACC) and sent to the DHSMV

D6 Data Forwarded to the DHSMV

DHSMV D6 Data Interface Description
The process of forwarding D6 data to the Central Site (FACC) and transmitting it to DHSMV is as follows:

- To begin the process, the county will put the data into the Fixed Length file format with data fields delineated in the *D6 Interface Definition–Extracted for DHSMV* table.
- This county D6 file will be transmitted to Central Site (FACC), who will combine it with D6 files from other counties to create a single D6 file.
- After this process, the file will be forwarded from the Central Site (FACC) to the DHSMV.
- The county will receive a confirmation file that will have the same filename as the file sent by the county, but with a ".rpt" extension. This file will list the citation numbers along with the Driver's license number for all of the records that were passed along to DHSMV.
- The County does electronically receive their DHSMV error reports directly from Central Site.

Criminal Financial Obligation Data Forwarded to the DHSMV

DHSMV Criminal Financial Obligation Data Interface Description
The process of forwarding Criminal Financial data to the Central Site (FACC) and transmitting it to DHSMV is as follows:

- To begin the process, the county will put the data into the Fixed Length file format with data fields delineated in the *CS Interface Definition–Extracted for DHSMV* table.
- This county CS file will be transmitted to Central Site (FACC), who will combine it with CS files from other counties to create a single CS file.
- After this process, the file will be forwarded from the Central Site (FACC) to the DHSMV.
- The county will receive a confirmation file that will have the same filename as the file sent by the county, but with a ".rpt" extension. This file will list the citation numbers along with the Driver's license number for all of the records that were passed along to DHSMV.
- The County does electronically receive their DHSMV error reports directly from Central Site.

Electronic Citation Process for the Florida Highway Patrol (FHP) only

The process for FHP sending electronic citations to Central Site (FACC) is as follows.

- To begin the process, the FHP will put the electronic citations into the "|" Delimited Length file format. For the delimited length convention, fields will be separated by the "|" character, and are listed in the *Citation Interface Definition (Variable length records with fields separated by "|")* table.
- Each record within the file must have an "update type" established of "A"dd. Establishing an update type will determine the action taken by the interface with respect to the incoming file. An "A," is for "add" and is used to identify a new citation being imported that has not already been incorporated into the Central Site database. The program will ensure there are no matching records in the citation history table to avoid replication.
- Finally, the file will be checked for errors. For instance, if an attempt is made to add a citation that currently exists, then an error file will be generated with the citation that caused the error, the error file will be sent to the County in which the citation was written, and the County will contact FHP to correct the error. The error file will be formatted exactly like the citation error file sent to the County (see Citation Error Report File above). It will have a ".frpt" extension, indicating it as an FHP electronic citation error report file
- Once the file has been processed, a new file will be created and sent to the County that the original citation was written in. The file will have "fcit" at the end of the file name to indicate it is an electronic citation file from FHP. This file will also be formatted in a fixed or delimited format, based on the County's specification.
- Please contact FACC if your County would like a "|" Delimited or Fixed layout that can be specifically used by your local agencies.

FS 316.1935 – Fleeing and Attempting to Elude:

Effective July 1, 2004, pursuant to Florida statute 316.1935, all offenses committed on or after this date require a mandatory revocation of the offender's driving privilege. DHSMV is authorized by Florida Statutes 322.26(3) and 322.28(1) to take departmental action for these offenses even when not directed to do so by the Court. This includes any offenses reported using violation codes **314** and **315**. Offenses for violation codes **314** and **315** should be reported as follows:

Statute/Description	Viol	ICD 26 and 27	ICD 34	ICD 35	Comments
316.1935(1), (2), (3) or (4)	314	Blank	3	YYMMDDD	Court shall revoke for a period not less than 1 year nor exceeding 5 years

Other Offenses – Discretionary Court Directed Suspension/Revocation:

Florida Statutes 316.655(2) and 322.26(8) allow the court to suspend/revoke an offender's driving privilege for any convictions of Florida Statute chapters **316**, **320** or **322** and/or other offenses as allowed by statute and specifically referenced in Appendix "C".

The following values must be supplied to report a court directed suspension/revocation:

	ICD 26 and 27	ICD 34	ICD 35	Comments
1	Blank	1 or 2	YYMMDDD	Used to add the statement "Susp/Rev Directed By Court" to offender's driving record with length of suspension [1]
2	Blank	1 or 2	0000997	Court directed with incarceration after disposition for violations of Chapter 316 and 782; defaults to indefinite suspension/revocation at DHSMV [2]
3	Blank	1 or 2	0000998	Court directed lifetime (permanent) suspension/revocation
4	Blank	1 or 2	0000999	Court directed indefinite suspension/revocation

The court **must** suspend/revoke for any offense reporting with violation codes **147, 160, 161, 162, 247, 446, 447, 607, 608.** In the event that the court does not direct suspension/revocation for these offenses, courts must submit dispositions using violation code **383**. DHSMV is **not** authorized by Florida Statutes to take departmental action for these offenses; a suspension/revocation period will not be applied to the offender's driving privilege by the department. Entries will **not** appear on an offender's driver's record for offenses specified below without the imposition of a driver's license action.

Statute	Description	Class	Disp	Pts	Mand	Fine	Viol

Reporting Fatalities:

Any offense involving a fatality requires a suspension be applied to the offender's driving privilege. In the event that the court declines to impose the suspension OR imposes a suspension period less than six months, DHSMV will take departmental action and suspend the offender's driving privilege for six months. When reporting a disposition for an offense with fatality the following values must be provided [7]:

	CIT ICD 89	DIS ICD 34	DIS ICD 35	Comments
1	Y	4	000000	Any offense with fatality where the court has **not** directed a suspension/revocation period; DHSMV will take administrative action suspending the offender's driving privilege for 6 months
2	Y	4	YYMMDDD	Any offense with fatality where the court has directed a suspension period equal to or greater than 6 months

[1] **YYMMDDD** – Number of years (YY) 1 year = 01, etc; number of months (MM) 1 month = 01, 12 months = 12, cannot exceed 12 months; number of days 1 = 001, etc, cannot exceed 365

[2] Values **0000997** incarceration suspension/revocation will initially be set to indefinite suspensions on the offender's driver's license record; DHSMV will correct the time period for the DL action once the offender is released from incarceration; per Florida statutes the effective date of the DL action must coincide with the offender's date of release from incarceration. Any Offense submitting disposition values of "0000997" in DIS ICD FIELD 35 **must** also supply the value of **"9" incarceration** in DIS ICD **FIELD 30**.

[3] Values **D/M** representing Department Maximum **must** be supplied for all DUI offenses where the court has not directed a suspension/revocation period; these values allow DHSMV to take administrative action per Florida statutes

[4] Violation code **821** should be used only for citations issued to drivers of commercial motor vehicles in violation of Florida Statute 316.80(1) Unlawful Conveyance of Fuel (see also FS 322.26(3)).
These records **must** also provide the value of **"Y"** in CIT ICD **FIELD 32** whenever violation code 821 is used.

[5] Values for departmental actions **must** be supplied for all Criminal Mandatory offenses where the court has not directed a suspension/revocation period; this allows DHSMV to take administrative action per Florida Statutes

[6] Any offenses reporting with violation code **315 must** also supply the value **"9" incarceration** in DIS ICD **FIELD 30**

94

[7] Offenses with violation codes listed above as Criminal Mandatory Offenses should **not** report values listed in this section; refer above referenced section for reporting requirements

Appendix E – Supplemental Dispositions

1. Definition

A supplemental disposition will be defined as a record in the disposition file which is sent by a county to TCATS central site with the value "S" in the supplemental code (field 31). This supplemental code is then included in the UTC disposition file sent from TCATS central site to DHSMV.

Typically, this is used to correct the data after an original disposition for this citation has been sent by the county to TCATS central site, has successfully loaded at central site, has been forwarded to DHSMV in the UTC disposition file, and has been successfully loaded into DHSMV's database. If a disposition has not been successfully loaded at TCATS Central Site the disposition can be resent as an 'original' disposition (and any necessary data in the citation file should be resent at the same time). If the disposition has been loaded at TCATS Central Site and DHSMV then a 'supplemental' disposition must be sent. However, DHSMV will process a supplemental disposition even if no first-time disposition has been received. (Their processing will reject the 'original' disposition if it is received after the supplemental one, so care should be taken to send the most up-to-date information in the supplemental disposition.)

Several supplemental dispositions may be sent for the same citation, if it is required to correct the data several times; however, these should only be sent on separate dates (multiple supplementals in the same input file will lead to unpredictable results).

If an original disposition for a citation has been successfully loaded into DHSMV's database, then any further dispositions for this same citation must be sent as supplementals, with value "S" in the supplemental code field. A second "original" disposition will not be updated at DHSMV.

2. Data

(a) Disposition data in UTC file (sent to DHSMV)

A supplemental disposition will be identified by the value "S" in the supplemental code (field 31 in the ICD for the disposition file). Additionally, the disposition type (field 5) must have a value of 0002 or higher (value 0001 is reserved for the original disposition).

A supplemental disposition must be sent if any of the following data sent in the original disposition has been changed:

- Disposition date   (field 6 in the ICD for the disposition file)
- Violation code   (field 22)
- Disposition verdict   (field 29)
- Court sentence   (field 30)
- Disposition county   (field 23)
- Court type   (field 25)
- Department/Court code (field 26)

96

- Court time   (field 27)
- Court revocation/suspension (field 34)
- Length of license revocation (field 35)

The remaining disposition fields sent to DHSMV may be amended using a supplemental disposition if desired:

- Disposition amount   (field 7)
- Actual fine   (field 19)
- SSN   (field 21)
- Disposition city   (field 24)
- Represented by counsel (field 28)
- Type of trial   (field 32)

If a disposition has been sent with an incorrect citation number, then this requires the sending of a disposition Add with the new citation number (and of course the new citation needs to be sent as an Add in the citation file). The supplemental process is not used to change the citation number. Moreover, DHSMV must be notified to remove the incorrect citation number from their records in this situation.

(b) Citation data in UTC file (sent to DHSMV)
Several fields in the UTC disposition file sent to DHSMV by TCATS are taken from the **citation** file sent by the county (not the disposition file). In order to trigger a new supplemental disposition for DHSMV for this situation, the county should send to TCATS central site an Update to the citation record, and a "dummy" supplemental disposition Add (all the information in the actual disposition record would be the same as in the original disposition, except for the value "S" in the supplemental flag and 0002 in the disposition type).

Changes to the following fields in the citation record require the sending of a supplemental disposition to DHSMV:

- Date of offense   (field 11 in citation file)   (field 6 in UTC file)
- Accident flag   (fields 78)   (field 9)
- Hazardous materials flag (field 37 in citation file)   (field 26 in UTC file)
- Commercial vehicle flag (field 32)   (field 27)
- Actual speed   (field 51)   (field 10)
- Posted speed   (field 52)   (field 11)
- Blood alcohol level   (field 62)   (field 35)
- DUI License surr. flag   (field 107)   (field 28)

The following field may be amended using a supplemental disposition if desired:

- License type   (field 30)   (field 48)

Changes to fields which would affect the identity of the violator cannot be sent using a supplemental disposition form if the violator has a FL driver's license; these changes need to be handled manually at DHSMV, and therefore need to be communicated by phone or paper. These fields are:

- Driver license number (field 28 in citation ICD)   (field 1 in UTC file)
- Violator name   (fields 14-17)   (fields 29-32)
- Date of birth   (field 24)   (field 34)
- Address of violator   (fields 18, 20-22)   (fields 37-38, 40-41)
- Sex of violator   (field 26)   (field 33)

The above fields can, however, be changed in a supplemental disposition for violators with out-of-state licenses, as well as:
- OOS license number   (field 28)   (field 42)
- Driver license state   (field 29)   (field 43)

An example of the need for a supplemental is: if the original UTC disposition sent to DHSMV had identified that an accident occurred (accident code = 1), then it is possible to correct this field using the supplemental process.

3. Load process
Supplemental dispositions will be in the input disposition file from the county. They do not need to be in a separate file. The data elements will be validated using the same logic as a first-time disposition (e.g. presence of mandatory fields). Supplemental dispositions should always be sent as "Add" type records, since only new records will be sent to DHSMV.

4. Extract process for DHSMV
The extract process that creates the UTC disposition file for DHSMV will pick up any new supplemental dispositions. Fields utc_disp_hist. dh_dhsmv_sent and dh_dhsmv_utc_file will be used to detect this (they will be NULL if the disposition has never been sent). When a supplemental disposition is extracted to the UTC file, these fields in the database record will be populated with the date and the file name.

5. DHSMV errors on supplemental dispositions
If a supplemental disposition sent to DHSMV in the UTC disposition file gives an error and cannot be loaded, it will be possible for the county to correct the data and cause a new supplemental disposition to be sent to DHSMV. This will simply be done by sending a new supplemental disposition (Add type), which will then be extracted and sent to DHSMV.

The process described above allows TCATS central site to load and process supplemental dispositions from the counties, and to pass them on to DHSMV in the UTC disposition file.
